Testing

1. User stories / Tasks

- Follow the user stories and tasks.
  - Make sure the functionality of every task is run
- Check for every task that the feature that was supposed to be implemented is implemented.
- Layout and design should conform to mockup and predetermined design choices (checkboxes in front of text etc.)
  - Check for typos and misspelled words on each added view

2. Bugs

- Ask if there are any known bugs before you start testing
- Check for different types of inputs max values/min values, extreme cases, outliers.
- Check that all feasible HTML-constraints are in place and work as expected
  - I.e should probably not work if you try to save first.

3. Definition of Done

- Justify completion according to acceptance criteria and DoD.

Code Review

- Make sure sql statements use wildcards
- Code should be documented (at least complicated logical components)
- If there is any section of code that is very bulky, its length should be justified
- Check if it is a logical and easy to use standardized css. (add/edit etc)
  - Try resizing the page to get a better understanding of the css structure.
  - Look for weird div structures, if you know how to use the inspector tool use it.
- Does the reviewer understand all of the code?
  - If the reviewee needs to explain some part of the code, then that part should be commented.
- Can I test / debug the code easily.

testing /code review #1

GROUP 1 (Jakob R & Erik (edit previous))

Testing: Can edit for an id that does not exist

GROUP 2 (Jakob H & Haris)(navMottagningsbesok)

TESTING
- Det står hembesök istället för mottagningsbesök
- Avvikelserna saknar att det står avvikelse på dem.
  - Det står bara logistik, familj, personal.
  - Ska stå barn/familj

- LUS: Om bara två besök syns så står det att mottagningsbesök 2-0 visas, det borde stå mottagningsbesök 2-1.

CODE REVIEW
- Commenting is needed:
  - Get statement in mottag.js
  - incindex/decindex
  - laterButton/earlierbutton (when do we change?)
  - Getheader explain the math. stuff

- Offset var in render() function is never used.

GROUP 3 (Nima, Muhammad, Anton) (AddMottagningsbesok)
- Known bug - går att lägga in sluttid som är tidigare än starttiden
- Sköterske-ID går att lägga in som negativt värde
- Div-strukturen lite oklar
- Add comment to validateMote

testing /code review #2

GROUP 1 (Jakob R, Erik)
- Needs more documentation in LoginView.js

GROUP 2 (Jakob H & Anton) (Startsida & nav-/addundersökning)
- navUndersok
  - Need comments in undersok.js
  - Comments needed in navUndersok and addUndersok
  - More comments in startpage

GROUP 3 (Nima, Haris och Mohammad)
- Aterlaggning
  - Need some comments
  - Get the Date from Database
  - Fix button spara i AddEndAterlaggning
